

Mobile Dust Collectors

Dust-Pro MXD Series 20,000 CFM Diesel Powered Dust Collector

The **Dust-Pro** line-up of mobile dust collectors will keep your work environment clean, safe and compliant. We provide a wide variety of CFM ranges to fit your application. Our mobile dust collection systems can be used on jobsite blasting operations or any other heavy dust load process.

The **Dust-Pro MXD Series 20,000 CFM Diesel Powered Dust Collector** offers an enclosed Kohler, 74 HP, 2.48 L, Tier 4 Final diesel engine that powers a belt driven centrifugal fan. The centrifugal fan generates airflow which passes through the baghouse area and the filtered airstream exits. OSHA requires increased ventilation to be compliant with the hazards of the workplace. Creating a negative zone or containment area will allow the dust particulate to be captured by the collector. The **Dust-Pro MXD Series** comes standard with MERV 15 rated Nano-fiber pleated cartridges in a vertical arrangement with reverse air pulse cleaning. These cartridges are effective at capturing large dust particles as well as smaller micron particulate from going back into the workplace. This unit is equipped with hydraulic driven augers to move the material from the collection cone into a 55-gallon drum or storage bin for disposal. This mobile dust collector is trailer mounted and can be easily maneuvered or towed to any jobsite. Installation hook-up is simple.

Contact one of our Sales Associates for more information on the **Dust-Pro MXD Series** mobile dust collectors.

Simple Solutions. Quality Craftsmanship. Proven Reliability.
