

Mobile Dust Collectors

## Flex-Vent MVE Series 20,000 CFM Diesel Powered Ventilation Unit

The **Flex-Vent** line-up of mobile ventilator/exhausters will keep your work environment clean, safe and compliant. We provide a wide variety of CFM ranges to fit your application. Our mobile ventilator and exhauster systems can be used on jobsite confined space operations or any other air moving process.

The **Flex-Vent MVE Series 20,000 CFM Diesel Powered Ventilator/Exhauster** offers an enclosed Kohler, 74 HP, 2.48 L, Tier 4 Final diesel engine that powers a direct driven centrifugal fan. The centrifugal fan generates airflow which passes through the inlet and exits out the discharge. OSHA requires increased ventilation to be compliant with the hazards of the workplace. Depending on the application, these units can be used as a utility blower to provide clean fresh air into a confined space or used for general ventilation, capable of removing harmful fumes and gases. The **Flex-Vent MVE Series** comes standard with QF connections on the inlet and outlet of the centrifugal fan for quick release ducting, hoses or accessories. This mobile ventilator/exhauster is trailer mounted and can be easily maneuvered or towed to any jobsite. Installation hook-up is simple.

Contact one of our Sales Associates for more information on the **Flex-Vent MVE Series** mobile ventilator and exhauster systems.

**Simple Solutions. Quality Craftsmanship. Proven Reliability.**
