

Mobile Dust Collectors

Dust-Pro HVC Series 210 CFM Electric Powered Dust Collector

The **Dust-Pro** line-up of mobile dust collectors will keep your work environment clean, safe and compliant. We provide a wide variety of CFM ranges to fit your application. Our mobile dust collection systems can be used on jobsite blasting operations or any other heavy dust load process.

The **Dust-Pro HVC Series 210 CFM Electric Powered Dust Collector** offers a 4 HP severe duty 460 volt, 3 phase, 60 hertz electric motor with NEMA 4 control panel that powers a direct driven centrifugal blower. The centrifugal blower generates high velocity airflow which passes through the baghouse area and the filtered airstream exits. OSHA requires increased ventilation to be compliant with the hazards of the workplace. The **Dust-Pro HVC Series** comes standard with MERV 12 rated Spun-Bond pleated cartridges in a vertical arrangement with reverse air pulse cleaning. These cartridges are effective at capturing large dust particles as well as smaller micron particulate from going back into the workplace. A cyclonic separator removes larger particles before entering the baghouse and is dumped into a 30-gallon drum or storage bin for disposal. This portable dust collector features a compact skid mount and can be easily maneuvered or lifted into any jobsite. Installation hook-up is simple.

Contact one of our Sales Associates for more information on the **Dust-Pro HVC Series** portable dust collectors.

Simple Solutions. Quality Craftsmanship. Proven Reliability.
