

Mobile Dust Collectors

Flex-Vent PVE Series 1-1/2 HP thru 40 HP Electric Powered Ventilation Unit

The **Flex-Vent** line-up of mobile ventilator/exhausters will keep your work environment clean, safe and compliant. We provide a wide variety of CFM ranges to fit your application. Our mobile ventilator and exhauster systems can be used on jobsite confined space operations or any other air moving process.

The **Flex-Vent PVE Series 1-1/2 HP to 40 HP Electric Powered Ventilator/Exhauster** offers a range of HP with severe duty 460 volt, 3 phase, 60 Hertz electric motor with a NEMA 4 control panel that powers a direct driven centrifugal fan. The centrifugal fan generates airflow which passes through the inlet and exits out the discharge. OSHA requires increased ventilation to be compliant with the hazards of the workplace. Depending on the application, these units can be used as a utility blower to provide clean fresh air into a confined space or used for general ventilation, capable of removing harmful fumes and gases. The **Flex-Vent PVE Series** comes standard with QF connections on the inlet and outlet of the centrifugal fan for quick release ducting, hoses or accessories. This portable ventilator/exhauster is skid mounted and can be easily maneuvered or lifted into any jobsite. Installation hook-up is simple.

Contact one of our Sales Associates for more information on the **Flex-Vent PVE Series** portable ventilator and exhauster systems.

Simple Solutions. Quality Craftsmanship. Proven Reliability.
